

JobSkillShare Week 4 UX Audit and Prototype Report

Intern: Faizian Ahmed Yousuf (Web Development and UI/UX Intern)

Reporting Week: Week 4

Focus: Membership & Registration Page UX Redesign

1. Weekly Task Summary

This report compiles the Week 4 internship tasks assigned for the Web Development and UI/UX track. The main focus was to revisit the membership and registration page audit from Week 1, review the currently updated JobSkillShare website, and build a high-fidelity prototype that resolves the identified user experience friction points.

Day	Assigned Task	Output Completed
Monday	Revisit the membership/registration page audit from Week 1; prioritize 3-4 specific improvements to prototype.	Prioritized key improvements: Reduced form friction, added trust signals, integrated program context.
Tuesday	Wireframe the improved membership page: streamlined sign-up flow, trust signals, and visible benefit list.	Wireframe mapped into a new UI layout emphasizing trust and clarity.
Wednesday	Build the improved membership page prototype in HTML, CSS, and JavaScript.	High-fidelity, modern prototype built with glassmorphism aesthetics and responsive design.
Thursday	Add affiliate link integration to the prototype; test the full flow from CTA click to enrollment page.	Affiliate link successfully integrated. The CTA directs to the proper enrollment flow.
Friday	Submit membership page prototype with documentation of changes; submit Week 4 report.	Code and final report uploaded to GitHub for review.

2. Audit of Updated Live Website & Changes Implemented

After reviewing the most recent updates on the JobSkillShare website, I audited the current membership/registration flow and implemented the following critical changes in the new prototype:

Improvement 1: Streamlined Sign-Up Flow & Reduced Cognitive Load

Issue: The previous registration form requested redundant information (e.g., confirming email and password multiple times) which increased typing friction, especially on mobile devices.

Implementation:

- Removed duplicate confirmation fields.
- Implemented single, clear input fields for Name, Email, and Password.
- Added a "Show/Hide Password" toggle to allow users to verify their password visually.
- Introduced Social Login Options (Google, GitHub, LinkedIn) to allow one-click registration, significantly reducing manual input effort.

Improvement 2: Enhanced Trust Signals at the Point of Action

Issue: Trust signals were either missing or positioned too far away from the payment and registration CTAs.

Implementation:

- Added a dedicated "Trust Signals" section right beside the form displaying: **60,000+ Active Members**, **120+ Countries**, and a **4.8/5 TrustPilot Rating**.
- Added secure checkout badges (256-bit Secure Checkout, 7-Day Money-Back Guarantee) directly visible before the user clicks the final CTA.

Improvement 3: Preserved Program Context During Enrollment

Issue: Users lost context of the specific program they were interested in when transitioning to the general membership registration page.

Implementation:

- Added a dynamic "Selected Program" indicator chip (e.g., *Cybersecurity Analyst Certificate Program*) at the top of the left panel. This reassures the user that they are in the right place and that their previous selection was saved.

Improvement 4: Collapsed Discount Code Field

Issue: The discount code field was prominent and interrupted the flow for users who did not have a code.

Implementation:

- Designed a collapsed-by-default "Have a discount code?" toggle using JavaScript. It keeps the primary focus on completing the registration while remaining accessible to those who need it.

Improvement 5: Premium, Modern Visual Aesthetics

Issue: The UI needed to feel more premium and modern to reflect the high quality of IT training provided by JobSkillShare.

Implementation:

- Rebuilt the UI using a sleek, dark-themed **glassmorphism** design.
- Integrated subtle background animations (floating glowing blobs) to make the page feel alive and engaging.
- Used the *Inter* font family for high legibility and a modern tech feel.
- Enhanced CTA buttons with gradient backgrounds, hover elevation effects, and distinct drop shadows to maximize conversion rates.

Before & After Visual Comparison

Note: Below are the screenshots of the old live registration flow vs the newly developed streamlined prototype.

Old Registration Experience (Live Site)

3. Affiliate Link Integration & Flow Testing

Affiliate Link Used: <https://www.jobskillshare.org/?ref=syfr#/membership>

Testing the Flow: The prototype simulates the enrollment process.

- Clicking the primary CTA button ("Complete Enrollment & Pay") programmatically triggers the submission and seamlessly redirects the user to the provided affiliate link.
- Clicking the "Back to Home" navigation link also utilizes the affiliate link, ensuring all return paths are properly tracked.

4. Conclusion

The new membership page prototype delivers a highly polished, professional user experience that directly addresses the pain points found in the Week 1 UX Audit. By prioritizing visual excellence, minimizing form friction, and anchoring the user with strong trust signals, the redesigned flow is poised to significantly increase conversion rates.
